– Discuss and decide over the platform
– Meet other people
– Extend democracy to your local community

**Developers and Researchers**
**Contribute code to GitHub**
– Join research teams
– Write documentation
– Join our technology committee
– Install, configure and enjoy decicim
– Hack collaboratively

**Institutions**
**Deliver the best democratic experience**
– Improve your democratic quality
– Make your institution smarter
– Open your governance
– Let your members/citizens self-organise
– Be cool

# Free Open-Source participatory democracy for cities and organizations

Democracy never felt so real.

decidim

# What is Decidim?

Decidim is more than a digital platform, it is a Free/Open project and infrastructure for participatory democracy.

Decidim involves code, documentation, design, training courses, legal frameworks, innovative practices, collaborative interfaces, development, user and facilitation communities, and a common vision.

Decidim helps society self-organize democratically at every scale: it enables citizens, organizations and public institutions (in districts, cities, regions, and beyond) to co-produce strategic planning, run participatory budgeting, construct multitudinous deliberation processes and enact distributed decision-making.

decidim.org

## Propose, meet, deliberate, decide, monitor: join democracy

Decidim makes possible for thousands of people to organize democratically by making proposals, joining public meetings, creating deliberative discussion, deciding through different forms of voting, and monitoring the implementation of these decisions.

## Configure participatory processes easily

Do you want to make a strategic plan? Or maybe to discuss new norms? Or perhaps have a debate around a new square or public building so that the common good is advanced? Decidim has an easy to use participatory process configurator that helps you structure and deploy almost any kind of democratic process.

## Participatory budgeting for real

Citizens will be able to directly decide how to spend funds from a public budget. You can open calls for proposals, discuss and set up priorities with citizens or members of the organization, estimate the price of the projects and open them to voting, and monitor the results.

## Online and offline integration

We are not only a digital platform, we're an application for people from all ages and origins. Decidim is designed to help solving the digital divide and to create new forms of multi-layered, augmented participation. The platform includes call for meeting, minutes, comments, etc.

## Modular, scalable, configurable: collaborate and upgrade

Decidim is not only a platform but actually a framework for participation, its architecture is modular and contributions from different institutions are easy to integrate, the framework is designed to scale efficiently and upgrades are immediate and automatic. You install it once, you benefit from future improvements.

The use and development of Decidim involves the acceptance of the code for democratic guarantees and open collaboration (Social Contract).
